Bird And Hird Birds Modern Insurance Law

Some bird species of aquatic environments, particularly seabirds and some waterbirds, have further evolved for swimming. Birds are a group of feathered theropod dinosaurs, and constitute the only living dinosaurs. Likewise, birds are considered reptiles in the modern cladistic sense of the term, and their closest living relatives are the ...

Bird - Wikipedia

Bird And Hird Birds Modern Insurance Law OpenLibrary is a not for profit and an open source website that allows to get access to obsolete books from the internet archive and even get information on nearly any book that has been written.

Based on fossil and biological evidence, most scientists accept that birds are a specialized subgroup of theropod dinosaurs. More specifically, they are members of Maniraptora, a group of theropods which includes dromaeosaurs and oviraptorids, among others. As scientists have discovered more nonavian theropods closely related to birds, the previously clear distinction between nonbirds and birds has become blurred. Recent discoveries in the Liaoning Province of northeast China, which demonstrate many small theropod dinosaurs had feathers,

contribute to this ambiguity. The consensus view in contemporary paleontology is that the birds, or avialans, are the closest relatives of the deinonychosaurs, which include dromaeosaurids and troodontids. Together, these form a group called Paraves. Some basal members of this group, such as Microraptor, have features which may have enabled them to glide or fly. The most basal deinonychosaurs were very small. This evidence raises the possibility that the ancestor of all paravians may have been arboreal, have been able to glide, or both. Unlike Archaeopteryx and the non-avian feathered dinosaurs, who primarily ate meat, recent studies suggest that the first birds were herbivores. The Late Jurassic Archaeopteryx is well known as one of the first transitional fossils to be found, and it provided support for the theory of evolution in the late 19th century. Archaeopteryx was the first fossil to display both clearly traditional reptilian characteristics: teeth, clawed fingers, and a long, lizard-like tail, as well as wings with flight feathers identical to those of modern birds. It is not considered a direct ancestor of modern birds, though it is possibly closely related to the real ancestor. Early disagreements on the origins of birds included whether birds evolved from dinosaurs or more primitive archosaurs. Within the dinosaur camp, there were disagreements as to whether ornithischian or theropod dinosaurs were the more likely ancestors. Although ornithischian (bird-hipped) dinosaurs share the hip structure of modern birds, birds are thought to have originated from the saurischian (lizard-hipped) dinosaurs, and therefore evolved their hip structure independently. In fact, a bird-like hip structure evolved a third time among a peculiar group of theropods known as the Therizinosauridae. A small minority of researchers, oppose the majority view, contending that birds are not dinosaurs, but evolved from early reptiles like Longisquama. The earliest known bird (avialan) fossils currently known hail from the Tiaojishan Formation of China, which has been dated to the late Jurassic period (Oxfordian stage), about 160 million years ago. The avialan species from this time period include Anchiornis huxleyi, Xiaotingia zhengi, and Aurornis xui. The well-known early avialan, Archaeopteryx, dates from slightly later Jurassic rocks (about 155 million years old) from Germany. Many of these early avialans shared unusual anatomical features that may be ancestral to modern birds, but were later lost during bird evolution. These features include enlarged claws on the second toe which may have been held clear of the ground in life, and long feathers or "hind wings" covering the hind limbs and feet, which may have been used in aerial maneuvering. Avialans diversified into a wide variety of forms during the Cretaceous Period. Many groups retained primitive characteristics, such as clawed wings and teeth, though the latter were lost independently in a number of bird groups, including modern birds (Neornithes). While the earliest forms, such as Archaeopteryx and Jeholornis, retained the long bony tails of their ancestors, the tails of more advanced birds were shortened with the advent of the pygostyle bone in the clade Pygostylia. In the late Cretaceous, around 95 million years ago, the ancestor of all modern birds also evolved better olfactory senses.

This book discusses legal issues related to the principle of indemnity in marine insurance contracts as well as disputes that may arise in a representative sample of common and continental law jurisdictions. It offers a comparative examination of Australian, English, Canadian, French, Greek, Norwegian and U.S. law. It examines the scope for a legal reform and the potential of achieving a better, more flexible, and modern indemnification regime.

The author shares her impressions of the development of modern dance and describes what it was like to work with Balanchine, de Mille, and other choreographers

A step-by-step guide to writing and managing the writer's life covers each portion of a written project, addresses such concerns as writer's block and getting published, and offers awareness and survival tips. Reprint. Tour.

This new field guide provides a suite of modern tools to effectively aid in the identification of more than 750 species of birds across North America. It introduces a "whole bird" approach by concisely gathering a collection of information about birds into one portable and well-organized volume. 2,000 stunning color photographs of birds in natural habitats show the most important field marks, regional population differences, life stages, and behaviors. 700-plus detailed and up-to-date color range maps show summer, migration, winter, year-round, and rare but regular occurrences of every major species. A DVD of birdsongs for 138 major species (587 vocalizations in all for 5½ hours of play); each high-quality MP3 file is embedded with an image of the bird, perfect to view on home computers and portable MP3 players. Concise descriptions of habits and ecology, age-related and seasonal differences, regional forms, vocalization, and informative captions pointing out the most important aspects of the bird. 46 group essays with information outlining taxonomy, feeding, migration, habitats, behaviors, and conservation status. A thorough and accessible introduction to birds and birding includes sections on parts of a bird, plumage and molt, food and feeding, migration, habitats, conservation, tips on how to become a better birder, and more. A detailed glossary of terms, species checklist, and quick index. The new Smithsonian Field Guide to the Birds of North America is perfectly designed to give birders the most powerful and user-friendly collection of information to carry into the field or wherever they enjoy learning about birds and nature.

In our visually-oriented society, music appears to stand apart from other arts. Yet just as a poet can write a poem whose focus is a painting, so musicians have composed scores based on poems, paintings, and other non-musical art forms. In instrumental music such as reinterperations are especially intriguing as the verbal or visual stimulus does not appear in performance but is rendered in musical form. In this study, Siglind Bruhn investigates how three French composers of the twentieth century, Claude Debussy, Maurice Ravel, and Olivier Messiaen, express extra-musical subtexts in their piano works. She shows how the relation between the subtexts and the musical works can be broadly categorized in terms of pictoriality and interiority. In all cases, Bruhn analyzes each musical piece and each source text in its entirety and in depth, drawing on her broad background in both literary and musical interpretation of the twentieth century. For pianists who seek to better understand an individual work, for scholars in the growing field of musical hermeneutics, and for lovers of music in general, this volume explores and makes explicit connections between music and other arts.

A unique interdisciplinary study, this book examines the British and European tradition of the wren hunt, in which a bird ordinarily revered and protected for most of the year was killed around the time of the annual solstice. In focusing on this ancient ritual, Elizabeth Atwood Lawrence draws on her training in cultural anthropology and biology to cast a fresh light on the complexities of human-animal relationships. Following an introductory chapter on animal symbolism, Lawrence proceeds in subsequent chapters to describe the wren both as a biological entity and as the subject of numerous tales and legends, to delineate the details of the wren hunt ceremony and the various meanings ascribed to it, and, finally, to relate the ceremony to important contemporary issues in human-animal interactions and current attitudes toward the living environment. Whereas most other studies tend to concentrate solely on human perceptions of animals and fail to include the animal's role in the relationship, Lawrence's approach shows how the participation of both animal and human

Read Free Bird And Hird Birds Modern Insurance Law

determines the symbolic status of the animal -- which in turn influences the treatment of that animal within a particular society. At a time when human destructiveness toward nature has reached tragic proportions, Lawrence contends, it is critical that we understand the processes by which certain cultural beliefs, in combination with observations about the natural history of a particular animal, result in emotional and mental responses that may ultimately determine the fate of that species. The author argues persuasively that the wren hunt -- with its ancient roots, associated beliefs, and complex meanings in the preindustrialized world -- still has much to teach us.

An overview of the field covers the collection and preservation of specimens and the history of ornithological collecting while touching upon the lives of noted collectors
