Bridge 2e helps students solidify their understanding of Algebra I and Geometry in preparation for Algebra II by providing a different kind of experience. This experience consists of modeling of real-world applications with a functions approach that will give them a deeper grasp of the necessary concepts. Focusing on topics essential to success in Algebra II, the authors have revamped the content to insure that all prerequisite topics for Algebra II are addressed.

The book makes a first course in linear algebra more accessible to the majority of students and it assumes no prior knowledge of the subject. It provides a careful presentation of particular cases of all core topics. Students will find that the explanations are clear and detailed in manner. It is considered as a bridge over the obstacles in linear algebra

and can be used with or without the help of an instructor. While many linear algebra texts neglect geometry, this book includes numerous geometrical applications. For example, the book presents classical analytic geometry using concepts and methods from linear algebra, discusses rotations from a geometric viewpoint, gives a rigorous interpretation of the right-hand rule for the cross product using rotations and applies linear algebra to solve some nontrivial plane geometry problems. Many students studying mathematics, physics, engineering and economics find learning introductory linear algebra difficult as it has high elements of abstraction that are not easy to grasp. This book will come in handy to facilitate the understanding of linear algebra whereby it gives a comprehensive, concrete treatment of linear algebra in \mathbb{R}^2 and \mathbb{R}^3 . This method has been shown to improve, sometimes dramatically, a student's view of the subject.

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.
