Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

Cannabis products are the most widely trafficked drugs worldwide, and it also remains the most widely used drug worldwide. At the same time, production methods have become increasingly sophisticated, resulting in the availability in illicit markets of a wide range of cannabis products. This updated and significantly revised manual has been prepared taking into account both developments in analytical technology and advances in the science of cannabis. It is aimed at the harmonization and establishment of recommended methods of analysis for national drug analysis laboratories. The manual suggests approaches that may assist drug analysts in the selection of methods appropriate to the sample under examination and provide data suitable for the purpose at hand, leaving room also for adaptation to the level of sophistication of different laboratories and the various legal needs.

This series of comprehensive manuals gives the home mechanic an in-depth look at specific areas of auto repair.

In the United Kingdom surface coal mining began in 1942 in response to a national shortage of deep-mined coal. By the 1980s, when Dave Wootton began touring sites and taking photographs, the industry was firmly established with major operations and very large machinery. His fully captioned pictures cover the period from 1986 until British Coal Opencast (BCO) was privatised in 1994. There are panoramic shots showing the scale of operations and fine close-ups of individual machines of many kinds at work. He includes several walking draglines such as the 4000-ton 'Ace of Spades', the largest of its kind in Europe. Another record holder was O&K's RH300 hydraulic shovel beautifully photographed by Dave at its Godkin, Derbyshire workplace. Dave visited some two dozen sites in Derbyshire, Northumberland, Yorkshire, South Wales and elsewhere, capturing the full range of surface mining activities. The equipment was manufactured by famous names such as Caterpillar, Ransomes & Rapier and Demag. BCO used contractors - so Wimpey, Taylor Woodrow, Fairclough and others are all seen playing their parts. The surface-mining industry has changed considerably since 1994, meaning that this collection of photographs has great historic interest for enthusiasts. The author also includes a short history of BCO, some machine specifications and copies of publicity material.
