Answers

Move your mouse over the "Answer" to reveal the answer or click on the "Complete Solution" link to reveal all of the steps required for multiplying polynomials. Multiply:

$$5x^2y(7x^2 - 4xy^2 + 2y^3)$$

Complete Solution. Multiply:

$$(4x - 7)(2x - 9)$$

Complete Solution. Multiply: $(3x - 5)(2x^2 - 4x + 7)$

In these lessons, we will learn how to multiply polynomials. Multiplying Polynomials and Monomials
When finding the product of a monomial and a polynomial, we multiply the monomial by each term of the polynomial. Be careful with the sign (+ or -) of each term. Example:
Evaluate a) $5(x + y)$ b) $-2x(y + 3)$ c) $5x(x^2 - 3)$ d) $-2x^3(x^2 - 3x + 4)$
Solution:

Multiplying Polynomials

(examples, solutions, answers, videos)

Multiplying polynomials is one of the simplest things in algebra. In this chapter, you will, with the help of your learnings in distributive property and exponential law, be able to multiply polynomials. At the end of this chapter, check out the multiplying polynomial examples that are available to strengthen your basics.

Multiplying Polynomials - MATH

The question we ask is 'how many times does $3x - 2$, NOT $3x - 2$, go into $27x^3$?'. The answer is $9x^2$ times. And we record this above the x^2 place, just as we did with the numbers: $3x - 2 \overline{) 27x^3 + 9x^2 - 3x - 10}$ Just as we did with the numbers we need to find the remainder, and so we multiply $9x^2$ by $3x - 2$ and write the answer down under $27x^3 + 9x^2$. Thus we get:

Multiplying Polynomials Worksheet One Answers

A polynomial is an expression which consists of two or more than two algebraic expressions. In a polynomial expression, the same variable has different powers. If the polynomial is added to another polynomial, the resulting expression is also a polynomial. The same goes with the operations of addition, subtraction, multiplication and division.
