Southeast Asia is a land of collisions —
both cultural and physical. Straddling the
boundaries of four separate tectonic plates,
this region is constantly reshaping itself —
shifting, colliding, and often erupting.
From the deepest spot on the ocean floor
to some of the most active volcanoes in
the world, this is a region of extremes.

The only landlocked country is the rural and remote country of Laos, which borders China, Vietnam, and Thailand. The physical geography of Southeast Asia includes beaches, bays, inlets, and gulfs. The thousands of islands and remote places allow refuge for a wide variety of cultural groups and provide havens for rebellious insurgents, modern-day pirates, and local inhabitants. Southeast Asia can be divided into two geographic regions.

Geography of Asia - Wikipedia

Southeast Asia has been perceived as a laboratory for studying plate tectonics. It is an assemblage of large river basins, peninsulas and archipelagos, and seas surrounded by islands. It is an area of great physical variations where parts of the physical environment have been significantly degraded anthropogenically, following rapid population growth and development.
